

## ENERGY POLICY

We the LGM, leading manufacturer of Submersible Pump sets, Column Pipe, Cables and Control Panels in the country are committed towards Nation's Mission for enhanced efficiency by making continuous efforts to optimize use of energy and to bring about improvement in the energy efficiency in all our manufacturing processes and products.

### **We shall strive to achieve the above by:**

- Procuring and using highly energy efficient products and technologies in our operations to reduce carbon footprint.
- Benchmarking all our products for energy consumption by comparison with the regional and national best.
- Eliminating wastage of energy and promoting reuse and recycling of resources, and be environmental friendly in our operations.
- Conducting periodic energy efficiency improvement studies and implementing all improvement measures and continuously monitoring gains obtained through Energy Management System.
- Involving all stake holders including employees in the energy conservation efforts through training & awareness programs. Recognizing employee's efforts through competitions and schemes.
- Promoting and increasing use of renewable energy resources, within and outside LGM.
- Adopting national energy conservation norms and codes in new building constructions as well as in existing buildings.
- Sharing and enriching our experience on energy conservation within LGM and other organizations.
- Complying with National Energy legislation and other related legislations.

LGM, as a part of our energy improvement strategy, will make every effort to reduce our specific energy consumption by 2 – 5% per year by promoting culture of innovation, creativity and aligning commitments at all levels.
